PROJECTS

Credit Card Fraud Detection Using Geological Location (*Django, Python*)

It helps in determining the fraud transactions by the use of geological location there by preventing them if there exists a huge difference in the location of the user and the location from which transaction is made .

Cooking Recipe Portal (*SQL, Flask*)

The recipe portal takes in information like the user ID and the recipe details including ingredients and cooking time . Anybody willing to cook something new can go and then search for recipes based on user or the difficulty level.

Ongoing Projects : Chatbot for school students in rural areas : The idea of the project is to create a chatbot and a website for rural students who do not have adequate support for education.
